Portfolio Statistics & Distribution Summary

Portfolio Overview

This report summarizes the portfolio-level distribution of ten financial KPIs generated by the Sprint 6 Day 37 analytics pipeline. The statistics are derived from output/portfolio_stats.csv.

Percentile statistics are emphasized because financial datasets may contain extreme company-level observations. The median (P50) therefore provides a robust representation of the central company in the observed universe.

Methodology Notes

- P10, P25, P50, P75 and P90 describe the cross-sectional distribution of each KPI.
- P50 is the median and is less sensitive to extreme observations than the arithmetic mean.
- Count represents the number of available company observations used for each KPI.
- Different KPI counts reflect unavailable source observations; missing financial values are not fabricated.
- Mean and standard deviation are retained for statistical completeness, but should be interpreted carefully when distributions contain outliers.
- This document is an analytical summary of the project dataset and does not constitute investment advice.
